Introduction to the Series

In order to keep up in today's world of rapidly changing technology we need to open our eyes and ears and, most importantly, our minds to new scientific ideas and methods, new engineering approaches and manufacturing technologies and new product design and applications. As students graduate from college and either pursue academic polymer research or start their careers in the plastics industry, they are exposed to problems, materials, instruments and machines that are unfamiliar to them. Similarly, many working scientists and engineers who change jobs must quickly get up to speed in their new environment.

To satisfy the needs of these "newcomers" to various fields of polymer science and plastics engineering, we have invited a number of scientists and engineers, who are experts in their field and also good communicators, to write short, introductory books which let the reader "understand" the topic rather than to overwhelm him/her with a mass of facts and data. We have encouraged our authors to write the kind of book that can be read profitably by a beginner, such as a new company employee or a student, but also by someone familiar with the subject, who will gain new insights and a new perspective.

Over the years this series of **Understanding** books will provide a library of mini-tutorials on a variety of fundamental as well as technical subjects. Each book will serve as a rapid entry point or "short course" to a particular subject and we sincerely hope that the readers will reap immediate benefits when applying this knowledge to their research or work-related problems.

E.H. Immergut
Series Editor

Preface

During the last fifty years I have been almost continuously working with molders, mold makers and mold designers, and in doing so learning the intricacies of designing of molds for many different products, from the early, simple compression molds to highly sophisticated injection molds. I have worked with them not only in North America, but also in Europe and Japan, and especially in the last 15 years, as consultant to those in developing countries who only recently started to seriously compete in the huge field of manufacturing molded plastic products.

During my discussions with these newcomers to the field, but also in earlier years, when talking to “old hands” in this field, I have often wondered how many of them really understood what they were doing when it comes to planning for and designing a new mold, and why they were doing it. In many cases I believe they took simply “the easy way out” by just imitating what they saw in other molds, and expanding on it, regardless of whether the molds used as “precedents” were for comparable conditions, for the same plastic, for similar molding machines, or for a similar production requirement. Another problem I saw was that in many mold making shops, here and everywhere, some designers were more intent on making “pretty pictures”, in the shortest possible time, rather than understanding that the job expected of a mold designer is to consider possible alternatives of how the planned mold could look, then make a practical and most suitable layout of a mold to produce the best quality product, at the lowest cost, and finally supply all pertinent information to the mold maker, the machinists, and assemblers.

With the advent of computer aided designing (CAD), the technique of making mold designs and drawings has become much easier to handle, and in some cases where products are similar, it has become often so simple that the mold design can be performed almost automatically, by just following the prompts of the computer, by recalling older complete or partial designs from the CAD memory, and creating a new mold by just changing some dimensions. If you are brought up in this environment, you may be able to produce good

designs, based on the available good precedents, but you will be hard pressed to generate a good mold for which there is no precedent on file.

I undertook to write this book “Understanding Injection Mold Design” essentially to explain what is really important in the design of an injection mold, so that a good mold, best suitable for the application, can be created even if there is no precedent. It is meant to be used to guide the designer to think, and to frequently ask why, where, when, how, etc., when considering the many possible choices before settling on a final concept. Also, in my experience, the greatest obstacle to creating a good design has always been the reluctance of the designer to acknowledge the possibility that he or she may be wrong, and that there may be a better way than the first one proposed. The designer must never forget, it is always cheaper to change a design layout even if it adds some design time, than to change (re-machine or modify) a poorly designed but already built mold.

Herbert Rees,
Orangeville, ON

Contents

1	Introduction	1
1.1	Economics of Mold Design	3
2	Starting New in the Mold Design Field	5
3	The Basics of an Injection Molding Machine	7
4	Understanding the Basics of the Injection Mold	9
4.1	Design Rules	9
4.2	The Basic Mold	9
4.2.1	Mold Cavity Space	9
4.2.2	Number of Cavities	10
4.2.3	Cavity Shape and Shrinkage	11
4.3	Cavity and Core	11
4.4	The Parting Line	12
4.4.1	Split Molds and Side Cores	13
4.5	Runners and Gates	14
4.6	Projected Area and Injection Pressure	15
4.6.1	Clamping Force	16
4.6.2	Strength of the Mold	16
4.6.3	Why are High Injection Pressures Needed?	17
4.7	Venting	18
4.8	Cooling	18
4.8.1	Basics of Cooling	19
4.8.2	Plate Cooling	22
4.9	Ejection	22
4.9.1	Automatic Molding	25
4.10	Shrinkage	26
4.10.1	Variable Shrinkage	26
4.11	Alignment	27

4.11.1	No Provision for Alignment.....	27
4.11.2	Leader Pins and Bushings	27
4.11.3	Taper Lock Between Each Cavity and Core	29
4.11.4	Taper Locks and Wedges	30
4.11.5	Taper Pins	31
4.11.6	Too Many Alignment Features	31
5	Before Starting to Design a Mold	33
5.1	Information and Documentation	33
5.1.1	Is the Product Design Ready?	33
5.1.2	Are the Tolerances Shown?	33
5.1.3	Are the Tolerances Reasonable?	34
5.1.4	What are the Cycle Times?	34
5.1.5	What is the Expected Production?	34
5.1.6	What are the Machine Specifications?.....	35
	5.1.6.1 Mechanical Features	35
	5.1.6.2 Productivity Features.....	37
	5.1.6.3 Additional Requirements for Some Molds ...	39
5.2	Start of Mold Design	42
5.2.1	Mold Shoes	42
	5.2.1.1 No Mold Shoe Used	42
	5.2.1.2 Standard Mold Shoes	43
	5.2.1.3 Home-Made Mold Shoes	44
	5.2.1.4 Special Mold Shoes.....	44
	5.2.1.5 Universal Mold Shoes.....	44
	5.2.1.6 Mold Hardware	45
5.2.2	Mold Drawings.....	45
	5.2.2.1 Assembly and Detail Drawings.....	45
	5.2.2.2 How Many Drawings and Views?	46
	5.2.2.3 Arrangement of Views	46
	5.2.2.4 Notes on Drawings	47
	5.2.2.5 Additional Information on the Drawings.....	47
5.2.3	The Stack Layout	48
	5.2.3.1 Significant Cross Section	48
	5.2.3.2 Will the Product Slide (Pull) out of the Cavity?.....	48
	5.2.3.3 Will the Product Eject Easily from the Core?	49

5.2.3.4	Establishing the Parting Line.....	51
5.2.3.5	Is the Cavity Balanced?	54
5.2.3.6	Determining the Method of Cavity Construction	54
5.2.3.7	Determining the Total Area of the Stack....	55
5.2.3.8	Determining the Core Construction	56
5.2.4	Selection of a Suitable Runner System	56
5.2.4.1	Cold Runner, Single-Cavity Molds.....	56
5.2.4.2	Cold Runner, 2-Plate Molds.....	57
5.2.4.3	Cold Runner, 3-Plate Molds.....	58
5.2.4.4	Hot Runner (HR) Molds.....	59
5.2.4.5	Cold and Hot Runner Molds, in Combination	60
5.2.4.6	Insulated Runner Molds	62
5.2.4.7	Common Rules for Runner Systems	63
5.2.4.8	L/t Ratio	65
5.2.5	Venting.....	65
5.2.5.1	What is a Vent?	65
5.2.5.2	Design Rules that Apply to All Molds	66
5.2.6	Ejection.....	68
5.2.7	Cooling.....	69
5.2.7.1	Purpose of Cooling a Mold	69
5.2.7.2	Show Cooling Lines in Stack	71
5.2.7.3	Screws	72
5.2.8	Alignment of Stack	73
5.2.9	Design Review	73
5.3	Preload.....	73
5.4	Mold Materials Selection	74
5.4.1	Effect of Expected Production	75
5.4.2	Forces in Molds	75
5.4.3	Characteristics of Steels and Other Mold Materials... ..	75
5.4.3.1	Availability.....	76
5.4.3.2	Strength of Material.....	76
5.4.3.3	Fatigue	76
5.4.3.4	Wear	77
5.5	Stack Molds	78
5.6	Mold Layout and Assembly Drawings.....	79
5.6.1	Machine Platen Layout	79
5.6.2	Symmetry of Layout, Balancing of Clamp	79
5.6.3	The Views	80

5.6.4	Completing the Assembly Drawing	80
5.6.5	Bill of Materials (BoM) and “Ballooning”	81
5.6.6	Finishing Touches	81
6	Review and Follow-up	82
7	Typical Examples	83
7.1	Containers or Other Cup-Shaped Products	83
7.2	Technical Products	87
7.3	Mold with Fixed Cores	88
7.4	Mold with Floating Cores	89
7.5	Molds with Side Cores or Splits	90
8	Estimating Mold Costs	92
8.1	Need for Estimate	92
8.2	Precedents	93
8.3	No Precedents	93
8.4	Methods of Estimating	94
8.5	Mold Cost and Mold Price	95
9	Machining, Mold Materials, and Heat Treatment	97
9.1	Machining of Mold Components	97
9.2	Materials Selection	101
9.2.1	Steel Properties	102
9.3	Heat Treatment	106
