Acknowledgement

I am thankful to Dr. Saurabh Chanana, my Ph.d. supervisor at Department of Electrical Engineering, National Institute of Technology, Kurukshetra, Haryana, India, for his kind support which he rendered out of his busy schedule during the course of my earlier research work. His approach and ability to derive the solutions to any problem in this world has immensely helped me in increasing my ability during finding solutions to problems. It was only after my research work had been over, I was able to present this manuscript with a focused approach.

I am indebted to my parents, my wife Ms. Yachana Gupta and my children. Special thanks at extreme end to my wife for her valuable support time to time which made me free out of other social activities to give enough time in writing this book.

Finally,

A big Thanks are due to my other family members, my teachers, my students,

my colleagues, my friends and The God

Special Thanks to Diplomica-Verlag Publishing House

Dedicated to
MY FAMILY

Preface

This book comprises 10 chapters each of which covers the study on solar energy and its application in solar Photovoltaic grid connected systems. Power quality investigation has been carried highlighting the study of key power quality parameters. Author has made an endeavor to tailor the all chapters for an audience of university faculty members, students, researchers and practitioners in solar energy sector.

Chapter 1 mainly presents the world perspective and growth of electric power through conventional sources and its vis-à-vis comparative growth with various sources of renewable energy. It has been discussed that electric power has been one of the most critical component among others available required for infrastructure and crucial for economic growth and welfare of any nation. The growth of any developing nation mainly depends on various resources critically required in growth of infrastructure. This chapter also highlights the recent advancements recently taken place in renewable energy. The measures being adopted for building and supporting in the further renewable energy growth in developing and developed economies is also presented.

In Chapter 2, an introduction of a solar PV cell with its behavior with the help of its electrical circuits in ideal and practical conditions is presented. This description is carried out using its basic output current and output voltage equations. In addition, the various parameters as defined in a standard manufacturer data-sheet is discussed. The basic difference between a solar PV cell and a normal p-n junction diode is also described. The importance of MPP using $V-I$ and $P-V$ electrical characteristics is highlighted. In order to study any PV model, the dependence of a solar PV cell on variable solar radiation and ambient temperature is derived and discussed.

Chapter 3 has presented a discussion on advantages and limitations of crystalline and thin film technologies with their common features. This chapter has begun from by looking at the development of solar cells from the early stage. Then the commercial silicon wafer based solar cell technology is described. Special attention has been given to each thin film technology as its related material properties, fabrication techniques are discussed. The chapter has covered thin film technologies such as amorphous silicon, CdTe, CIGS, and thin film crystalline silicon solar cell technologies.

Chapter 4 has highlighted the needs of PV installation components other than PV panels. These components are jointly referred to as the Balance of System (BOS) and include the batteries, DC-DC converters, DC-AC converters for AC loads and grid connected systems. Since $P-V$ and $V-I$ curves of a solar panel are non-linear in nature, the need and importance of MPPT technique in extracting variable solar power at maximum points is described in PCS systems.

In chapter 5, the introduction of PQ and its concerns has been presented. The various PQ issues have been introduced and discussed according to IEEE and IEC standards. The effect of each of PQ issue has been described for a distribution system according to IEC standard. It is discussed that in electric power systems, hundreds of power generating stations and load centers are interconnected and operated. There are various PQ problems likewise, voltage sag, voltage swell, transients, voltage interruption, harmonics, noise and notching. Each PQ problem can be solved by the proper coordination among all power system components.

Chapter 6 has presented that Matlab is a software package, which can be used to perform analysis and solve mathematical and engineering problems. Introduction to various Matlab windows have been given and described. Simulink contains a library editor of tools from which we can build input/output devices and continuous and discrete time model simulations. Simulink has a comprehensive block library which can be used to simulate linear, non-linear or discrete systems. C codes can also be generated from Simulink models for embedded applications and rapid prototyping of control systems. This chapter also highlights the procedure for the operation of Simulink software with building blocks.

Chapter 7 has presented the modeling of solar PV single stage grid connected system at unity power factor. No transformer is used in the proposed system as it increases the level of harmonics in the overall system. The nature of real power generated by solar PV array through VSC has been shown and proved that whenever the power from grid is un-available, the real power requirement of the load is achieved by VSC. Data based MPPT is proposed through which behavior of actual DC link voltage is discussed.

In chapter 8, the simulation of the proposed system is performed under two different cases. In first case, the effect of changing power factor on active power, reactive power and THD values is observed. It is observed that the THD of grid current increases with increase in the phase angle of grid current VSC voltage. It affects the active power flow among VSC, load and utility grid. In the second case, the effect of changing frequency on active power, reactive power and THD

values is noticed. It is observed that the THD of VSC current increases whereas, the THD of grid current remains constant.

Chapter 9 has presented the analysis of two-stage solar PV grid connected system which is evaluated at linear RLC load. In DC-DC boost converter, the IC-MPPT technique which is capable to operate even under changing environmental conditions is implemented. Real and reactive power exchange is exchanged among VSC, load and utility grid. Voltage and current waveforms are presented. In order to evaluate the level of power quality, the THD analysis is carried out using FFT. It has been found that although level of harmonics generation from VSC is high, the control system is designed that level of harmonics is reduced for grid injected current.

Chapter 10 has discussed the system performance at P&O based MPPT technique for solar PV two-stage grid connected system. It has been found that harmonic level is reduced for converter current and grid injected current. However, this MPPT is not able to track the reference MPPT voltage accurately. This validates that this MPPT is not able to operate under wide range of changing environmental conditions. The behavior of voltage and current levels of VSC, load connected and utility grid has also been discussed. Active and reactive power exchange among VSC, load connected and utility grid has also been highlighted.

Table of Contents

Acknowledgement	5
Preface	7
List of Abbreviations.....	14
List of Tables.....	16
List of Figures	17
CHAPTER I: ELECTRIC POWER - A WORLD PERSPECTIVE.....	21
1.1. Introduction to Power Sector-A World Perspective	21
1.1.1 Coal	22
1.1.2 Natural gas	22
1.1.3 Petroleum and Other Liquid Fuels.....	22
1.1.4 Renewable Resources	22
1.2 Status of Indian Power Sector	23
1.3 Status of Global Renewable Energy	25
1.4 Conclusion	27
CHAPTER II: AN INTRODUCTION TO SOLAR PHOTOVOLTAIC CELL & MODELING	28
2.1 Introduction	28
2.2 A Solar PV Cell-A p-n Junction Diode	28
2.3 Difference Between a Solar PV Cell and a p-n Junction Diode.....	30
2.4 Basic Parameters of Solar PV Cell.....	31
2.4.1 Voltage-Current (V-I) Characteristics	31
2.4.2 Short Circuit Current (I_{sc})	32
2.4.3 Open-Circuit Voltage (V_{oc}).....	32
2.4.4. Maximum Power Point (MPP).....	33
2.4.5 Fill Factor (FF).....	33
2.5 PV Module Arrangement.....	33
2.5.1 Typical Model of a Solar PV array	34
2.6 Conclusion	35

CHAPTER III: SOLAR CELL TECHNOLOGIES	36
3.1 Introduction	36
3.2 Classification of solar Photovoltaic Cells.....	36
3.2.1 Silicon Cells	37
3.2.2 Single-Crystal Silicon Cells.....	37
3.2.3 Multi-crystalline Silicon Cells	38
3.2.4 Thin Silicon (Buried Contact) Cells	38
3.2.5 Amorphous Silicon Cells	38
3.2.6 Gallium Arsenide Cells.....	39
3.2.7 Copper Indium (Gallium) Diselenide Cells	40
3.2.8 Cadmium Telluride Cells.....	40
3.3 Emerging Technologies	41
3.4 Conclusion	42
CHAPTER IV: MAXIMUM POWER POINT TRACKING IN POWER	
CONDITIONING SYSTEM	43
4.1 Introduction	43
4.2 Need of MPPT Technique	43
4.2.1 DC-AC Converter Systems.....	44
4.2.2. DC-DC Converter Systems.....	45
4.3 Power Voltage and Voltage Current Characteristics of a Typical PV Module	46
4.4 Classification of MPPT Techniques	47
4.4.1 P&O-MPPT Technique.....	47
4.4.2 IC-MPPT Technique.....	50
4.5 Analysis of Other MPPT Techniques.....	51
4.5.1 Fractional Open-Circuit Voltage Technique.....	52
4.5.2. Fractional Short-Circuit Current Technique	52
4.6 Conclusion	52

CHAPTER V: INTRODUCTION TO POWER QUALITY.....	54
5.1 Introduction	54
5.2 Sources of Poor Power Quality	55
5.3 Need of Power Quality Concerns	55
5.4 Power Quality Problems	55
5.5 Solutions Adopted to Improve Power Quality	59
5.6 Power Quality Standards	59
5.7 Standards Related with Voltage Characteristics.....	59
5.7.1. IEEE Standards	59
5.7.2. IEC Electromagnetic Compatibility Standards.....	60
5.7.3. The European Voltage Characteristics Standards.....	60
5.8 Standards Related With Current Characteristics	61
5.8.1. IEEE Standards	61
5.8.2. The International Electro Technical Commission	62
5.9 Conclusion	62
CHAPTER VI: MATLAB & SIMULINK SOFTWARE	63
6.1 Introduction	63
6.2 Introduction to Matlab Software.....	63
6.3 Matlab Windows.....	64
6.4 Matlab File Types	65
6.5 Simulink Software	65
6.5.1 Controlling Execution of a Simulation	72
6.5.2 Starting a Simulation.....	72
6.5.3 Ending a Simulink Session	73
6.6 Conclusion	73

CHAPTER VII: SOLAR PV GRID CONNECTED SYSTEM WITH MPPT CONTROL..	75
7.1 Introduction	75
7.2 System Computation Model	75
7.2.1. Rotating Reference Frame Transformation	76
7.2.2 Real & Reactive Power Control.....	77
7.2.3. Synchronization and Control of Three-Phase Grid Connected Inverter System	79
7.2.4. Generation of PWM Pulses.....	80
7.3 Controlling Scheme of Voltage Source Converter	82
7.4 Data MPPT Control for Maximum Power Point	84
7.6 Conclusion	89
CHAPTER VIII: EVALUATION AT DIFFERENT POWER FACTOR &	
FREQUENCY.....	91
8.1 Introduction	91
8.2 Simulation Results and Discussion.....	91
8.2.1 Case I at different power factors and same frequency	91
8.2.2. Case II at different frequency and same power factors.....	100
8.3 Conclusion	104
CHAPTER IX: MODEL ANALYSIS WITH INCREMENTAL CONDUCTANCE	
MPPT TECHNIQUE	106
9.1 Introduction	106
9.2 Voltage and Current Controllers.....	107
9.3 Solar PV Computation Model	108
9.4 Simulations Results and Discussion	110
9.5 Conclusion	115
CHAPTER X: MODEL ANALYSIS WITH PERTURB & OBSERVE MPPT	
TECHNIQUE	116
10.1 Introduction	116
10.2 Proposed System Configuration	116
10.3 Simulation Results and Case Studies.....	117
10.4 Conclusion	122
References	123
