I'd like to thank my four children, Kyle, Cameron, Gillian, and Curtis, for their love and support. All the kids are teenagers now, so they were quite happy to leave me alone to write as much as I needed. And this time around, some of them can drive. As a result, leaving me alone was even less demanding on them than it has been for past books. They are my loves and my life would be much less rich without them.

ABOUT THE AUTHOR

BRUCE JOHNSON is a partner at ObjectSharp Consulting and a 30-year veteran of the computer industry. The first third of his career was spent doing "real work," otherwise known as coding in the UNIX world. But for 20 years, he has been working on projects that are at the leading edge of Windows technology, from rich client applications to web applications and APIs, with a sprinkling of database and front-end development thrown in for good measure.

As well as having fun with building systems, Bruce has spoken hundreds of times at conferences and user groups throughout North America. He has been a Microsoft Certified Trainer (MCT) and the co-president of the Metro Toronto .NET User Group. He has also written columns and articles for numerous magazines. For all of this activity, Bruce was also a Microsoft MVP for more than ten years. At the moment, he's already working on the outline for his next book. Because why not?

ABOUT THE TECHNICAL EDITOR

JOHN MUELLER is a freelance author and technical editor. He has writing in his blood, having produced 104 books and more than 600 articles to date. The topics range from networking to artificial intelligence to database management to heads-down programming and beyond. Some of his current works include a book about machine learning, a couple of Python books, and a book about MATLAB. He has also written *AWS for Admins for Dummies*, which provides administrators with a great place to start with AWS, and *AWS for Developers for Dummies*, the counterpart for developers. His technical editing skills have helped more than 70 authors refine the content of their manuscripts. John has always been interested in development and has written about a wide variety of languages, including a highly successful C++ book. Be sure to read John's blog at `http://blog.johnmuellerbooks.com`. You can reach John on the Internet at `John@JohnMuellerBooks.com`.

ACKNOWLEDGMENTS

TO THE OUTSIDE, it might look like the writing of a book is an individual effort. It's not. Not even close. There is no way that this book could have come to fruition without the efforts and assistance of a number of people. The fact that the book is clear, accurate, and useful is because of the contributions of my editor, my technical editor, my copy editor, and the proofreader. And I haven't even gotten to those who are responsible for the production of the final copies. I'm incredibly grateful for everyone's help and have enjoyed working with these very talented people. It's makes the process a lot more enjoyable.

I would especially like to thank everyone at Wrox who has helped me through this process. In particular, thanks go out to Kelly Talbot. This is, if I'm not mistaken, the third or fourth book on which I have worked with Kelly. As always, his attention to detail has prevented a very large number of mistakes. But, more than that, he is not only patient, but diligent in ensuring that I meet my deadlines. Thanks also go to John Mueller, who not only made sure that the technical mistakes I made in my first draft were cleaned up before publication, but also provided some great suggestions that helped me clarify my writing. Finally, thanks to Nancy Bell, who had to slog through what I wrote and convert it to grammatically correct prose. The efforts of all of these individuals are what make the book possible and, hopefully, a success.
